Date Tue 8/4/2026 8:59 AM

To David Watkins <davidaw@uw.edu>; AGBOYIBOR, Kouamivi Mawuenyegan <agboyibork@who.int>

Hi Kouamivi,

We reviewed the document you shared yesterday and addressed most of the comments. However, three key areas require highlighted by co-authors require further work:

1. Updating the relative risks for blood pressure reduction using the latest evidence from BP trials.
2. Distinguishing people with and without diabetes in the model and policy scenarios.
3. Ensuring compliance with GATHER, including additional sensitivity and uncertainty analyses.

The first item is complete, and the updated relative risks did not produce substantial changes in the results. I am working on the remaining two items and hope to share updates shortly.

I noticed we have a call on Thursday, so we can discuss these points then.

Best,

William Garcia

Dear David,

That's for economic analysis, but the first paper we still need to move forward.

Best regards,

Kouamivi

Good to hear from you Kouamivi.

For the paper, I think William was needing some input from Filip Mehus on what sort of unit costs would be acceptable to use. Would you mind ping him?

I'm available to meet at 4:30pm CEST on Thursday - if that works, please send an invite.

Dear William,

I hope you are doing well,
This is a follow-up reminder.

Dear David,

Is anytime Wednesday or Thursday this week in the Afternoon CET will be available for you?

Kind regards,
Kouamivi

Dear William,

As you can see I have in the attached (paper1 health gain) several pending question to your kind attention.

Kind regards,
Kouamivi

Dear Kouamivi,

I hope you are doing well.

I am attaching the updated figures as requested.

Could you please share the latest manuscript version with the edits/comments you mentioned? so that we can make sure we are working from the most up-to-date file and also I can add discussion about calibration.

I also wanted to follow up on our earlier questions: could you introduce us to the relevant WHO economics team member, and let us know what manuscript status would be sufficient to close out the contract?

Best,

William

Subject: Re: UW-WHO Hypertension Control modelling manuscripts

Dear Kouamivi,

Thank you for your message and for the detailed requests. David and I have discussed, and please find our responses below.

Paper 1

A. Health gain paper: We are working through the pending queries and comments in the main tables, figures, and supplementary materials. Would it be possible to share the updated version by Tuesday, June 9, rather than Friday?

B. Economic analysis: We plan to share a slide deck outlining methodological alternatives for the economic gain analysis. We anticipate that this paper will require WHO economics clearance, and we want to work with the WHO economics team from the outset to align our analysis with WHO standards, both for costing and for the estimation of economic benefits. We are fully prepared to do the work, but we believe it needs to be done within WHO guidelines; otherwise, there could be problems getting the paper cleared down the line. To that end, could you please introduce us to whoever on the economics team would be responsible for reviewing the paper before submission?

Paper 2

For the second paper, we suggest two complementary approaches:

1. Retrospective analysis: Analyze feasible scale-up patterns using NCD Risk Factor Collaboration data together with the WHO hypertension report, conducting an efficiency frontier analysis on cascade data (aware × treated × controlled).
2. Prospective analysis: Model the potential impact conditional on feasible scale-up.

Both approaches would be structured to address the translation problem directly: aggregating country-level feasible scale-up to the global level, quantifying any gap relative to the 150 million target, and decomposing the contribution of individual countries and cascade steps to identify where gains are concentrated.

We will prepare a slide deck on the analysis structure along these lines for your review.

Additionally, following up on David's earlier question: our grants office is asking whether we are ready to close out the contract. Could you let us know what minimum status of the manuscripts you would consider sufficient to close the contract, and by when you would expect that to be feasible?

Please let us know your thoughts.

Best,
William Garcia

Subject: UW-WHO Hypertension Control modelling manuscripts

Dear William,
Dear David,

Good morning,
I would like to get your insight on some pending questions I have added to the manuscript the main table, figures and supplementary materials.

1. **First paper:**

Please not that internally for this first paper, we have decided to split the health gain from the economic gain to make tow different papers.

- First paper on health gain: here are my requests: Review and respond to all pending queries and comment I have directed to you in the manuscript: in the main table
 [Main Tables_paper 1_V2_02062026.docx](#)
 ; main figures
 [Main Figures_Paper 1_V2_02062026.docx](#)
 ; and supplementary materials
 [Supplementary Material_Paper 1_V2_02062026.docx](#)
 . It will be highly appreciated if you could have this by Friday.
- Economic Analysis: kindly share a slide deck only for the economic gain considering the following analysis plan:
 [Analysis plan_Paper 2_Modelling the potential financial impacts of WHO CVD Targets.docx](#)

2. For the Second paper:

Title: *"From national hypertension control targets to global impact: modelling pathways to 150 million additional people with controlled blood pressure by 2030"*. This paper should focus on the translation problem: how country-level hypertension control targets aggregate into the global target of 150 million additional people with controlled blood pressure by 2030, and which countries or pathways contribute most. Kindly share the slide deck on the analysis structure for review

Kind regards,
Kouamivi

Subject: [EXT] UW-WHO Hypertension Control Targets follow-up and next steps on manuscript and proposal

Dear Kouamivi,

It was a pleasure meeting you. As discussed, please see below the next steps:

1. Updated manuscript: Attached are the revised materials incorporating the economic value estimates (highlighted in purple). Over the next 2–3 weeks, we will work with David on sensitivity analyses, particularly for the hypertension control scenarios among populations with and without diabetes.
2. Proposal: Please find attached the initial proposal we discussed. We would greatly appreciate your guidance on how best to shape the paper 2 aims so we can align the analysis accordingly.
3. Journal submission strategy: We agreed on the following priorities. I am including the Editors-in-Chief so you can reach out to them directly to confirm whether they would be interested in the manuscript.
 - First choice: The Lancet Global Health (Editor-in-Chief: Zoë Mullan, zoe.mullan@lancet.com)
 - Second choice: PLOS Global Public Health (Editors-in-Chief: Catherine Kyobutungi; Manuela De Allegri; contact: plogph@plos.org)
 - Third choice: Global Heart (Editor-in-Chief: Raul Santos)

Please let us know your thoughts, particularly on the framing of the aims of paper 2 and any preferences regarding journal outreach.

Thanks again,

William Garcia
